

Building/Engineering high performance streaming solutions: experiences from our research for IoT

Monday, 29 September 2025 10:50 (30 minutes)

Experiences designing and engineering high-performance streaming solutions tailored for the unique challenges of IoT data. Architectural choices, scalability strategies, and lessons learned from prototyping and deploying systems that handle massive, real-time data flows. Open challenges and future directions for building robust, efficient streaming infrastructures that can keep pace with the rapid growth of IoT.

Presenter: GOUNARIS, Anastasios (AUTH)
